Date July 30, 2009

David Furth, Deputy Chief
Public Safety and Homeland Security Bureau
Federal Communications Commission
Address
Washington, D.C., 20554

Reference: 800 MHz NPSPAC Plan Amendment WT Docket No. 02-55, [NPSPAC Docket No. 89-573]

Dear Deputy Chief Furth:

Enclosed please find attached the Region 28, NPSPAC “Streamline” Amendment. If you have any questions, please call me at (302) 739-9648.

Amendments to the plan include:

Location of Amendment:	Amendment Description:
1. Page # Cover Page	Replaced Regional Logo with new colored version
2. Page # 20, Appendix F2	Updated with Post-Rebanding Channel Assignments

Sincerely,

Richard R. Reynolds, Chair
(Region 28 – 800 MHz RPC)

Attachments: Region 28 – 800 MHz Post-Rebanding Plan

REGION 28 PLAN
(As defined in)
FCC Gen. Docket No. 87-112

FORWARD

Future Planning Requirements

In order to provide realistic planning for public safety communications into the future, it is necessary to have sufficient contiguous radio spectrum at the onset of the planning process. There is a need for public safety contiguous virgin radio spectrum onto which an orderly migration over a long term may proceed. The amount of spectrum allocated need not require any more spectrum than that already allocated to public safety. Efficiency gained through contiguous spectrum and advanced technology will result in adequate public safety communications. In exchange for contiguous spectrum existing bands from 30 MHZ through newly allocated 800 MHZ could be returned for allocation to other radio services. Without sufficient spectrum available, this planning effort is relegated to merely distributing the recently identified public safety band at 800 MHZ. In urban areas, where frequency need and shortage are the greatest, these channels will be depleted before any type of significant planning process can make an inroad to the public safety communications problem. Future TV sharing has the capability of providing additional spectrum to the urban areas. However, this is yet another band that will further divide the interoperability of public safety. Additionally, this spectrum will be made available only within the major urban areas, leaving those areas just outside of the major urban areas without spectrum at 800 MHZ or TV sharing. If, at a minimum, this plan could consider 800 MHZ and TV sharing together, a more equitable and longer lasting plan could be developed. TV sharing would be used for limited coverage urban systems, while 800 MHZ would be used for wide area systems which are beyond the scope of TV sharing. Although allocation of spectrum in a piecemeal fashion is necessary to avert the present crisis, holding this allocation as a pretext of a comprehensive Public Safety communications plan is at best untenable and in reality unconscionable.

REGION 28 PLAN
(As defined in)
FCC Gen. Docket No. 87-112

SCOPE

Introduction

When the Federal Communications Commission announced the 800 MHZ allocation of reserve radio frequencies to the Public Safety Services in July 1986, they mandated that a National Plan outlining the use of public safety frequencies must be in place before any agency would receive channels from this new allocation. In November 1986, a national meeting of all interested parties was called in Washington, D.C., with The Associated Public Safety Communications Officers, Inc., (APCO) as the convener. One of the major objectives of the meeting was to determine what the national plan should consist of. In December of 1986, the Commission (FCC) established the National Public Safety Planning Advisory Committee (NPSPAC) to involve parties interested in Public Safety in the planning effort. The date for submission of a final report from NPSPAC was established as September 30, 1987. The deadline was met. The recommendations contained in the Final Report were, for the most part, accepted by the Commission. The Final Report and Order, General Docket No 87-112, was adopted by the Commission, November 24, 1987. The National Plan established planning regions covering all parts of the United States, Puerto Rico, and the U.S. Virgin Islands. The Docket noted that no assignments would be made in the 821-824 and 866-869 MHZ bands until a regional plan for each of the regions had been accepted by the Commission. Forty-eight regions were identified in the final docket. Region 28 was identified as the "New Jersey" Region. However, the area defined in the docket was in conflict with an area previously defined by an ad hoc regional planning committee, specifically, the Greater Delaware Valley Regional Planning Committee, which had been in existence for over one year. NPSPAC filed a "Petition for Partial Reconsideration and Expedited Action" with the F.C.C. requesting that Region 28 be modified to the Region identified by this Planning Committee.

Purpose

This Regional Plan was developed, as required by the Federal Communications Commission in Docket 87-112, to insure that maximum public benefit be derived from all radio communication systems used by eligibles that come under FCC rules for public safety radio services. Recognizing that the Tri-state area is currently experiencing shortages in the number of radio channels needed by many public safety agencies, the Plan was established with the objective of ensuring that unassigned frequencies would be distributed in an equitable fashion to those public safety agencies with the highest demonstrated need and that assigned frequencies were being utilized in the most efficient manner.

Coordination with Adjacent Regions

The importance of coordination of the Region 28 Plan with those of adjacent regions has been uppermost in the minds of the committee members throughout the planning process. Consequently, the Region 28 Committee is pleased to have members of this committee who also serve on Region 8, Region 20 and Region 36 Committees. The three APCO frequency coordinators for Delaware, New Jersey and Pennsylvania are also included on the Region 28 Committee. In addition, all of the surrounding regions have been provided with a copy of the plan and requested to provide their comments prior to filing of this plan. Positive comments were received from Region 8, Region 20 and Region 36 and no comments were received from Region 30 or Region 55 (see Appendix K).

Flexibility of the Plan

Although the plan concentrates on the current needs of the public safety community, there is recognition of the area's future requirements. To this extent the Plan may address such issues as UHF/TV sharing of frequencies, seeking a more restrictive definition of "public safety", modern loading standards, and other operational/technical initiatives. Furthermore, as conditions change, the Plan will be modified, when warranted, to reflect such changes.

REGION 28 PLAN
(As defined in)
FCC Gen. Docket No. 87-112

AUTHORITY

Regional Planning Committee

The Federal Communications Commission, in its November 24, 1987 Report and Order applicable to Docket 87-112 noted:

The Associated Public-Safety Officers, Inc. (APCO), acting under its frequency coordination responsibilities, will be responsible for convening a meeting to initiate the planning process in each region. For each region, APCO should appoint a local convener who will be responsible for organizing and publicizing the first planning meeting. The convener should set a date for the initial planning meeting, allowing at least 60 days for appropriate public notifications. Parties interested in participating in the regional planning process should contact the appropriate convener.

This was accomplished in Region 28, with the initial meeting being held on April 26, 1988, in the Montgomery County Fire Academy Conshohocken, Pennsylvania. At that meeting, a board-of-officers was elected, rules of order established, and certain task chairpersons appointed. All attendants were invited to take part in the development of this regional plan.

Prior to this FCC mandated meeting, an ad hoc committee, similar to the committee which had been formed in the New York Metropolitan region, was in existence for the area now defined as Region 28. The committee consisted of representatives of the States of Delaware, New Jersey and Pennsylvania. Rather than start from square one, the trials and tribulations suffered by these pioneer groups were taken advantage of by the new Region 28 Planning Committee. It should come as no surprise to the reader of both plans, that plagiarism is apparent. However, as with real life day-to-day interoperability, cooperation is a necessity for survival in the public safety environment. The work of the Region 8 and 28 ad hoc committees served as a foundation for this final plan.

National Interrelationships

The Regional Plan is in conformity with the National Plan. If there is a conflict between the two plans, the National Plan will govern. It is expected that Regional Plans for other areas in the country may differ from the Plan for this area due to dissimilar situations. By officially sanctioning the Plan the FCC agrees to its conformity to the National Plan. Nothing in the Plan interferes with FCC for frequency coordination in the Private Land Mobile Service but rather provides procedures that are the consensus of the Public Safety Radio Services user agencies in the Region. If there is a perceived conflict, the judgment of the FCC will prevail.

Federal Interoperability

Interoperability between Federal, State and Local Government during both daily and disaster operations will primarily take place on the five common channels identified in the National Plan. Additionally, through the use of S-160 or equivalent agreements, a licensee may permit Federal use of a non-Federal communication system. Such use, on other than the five identified common channels, is to be in full compliance with FCC requirements for government use of non-government frequencies (Title 47 CFR section 2.103). It is permissible for a sub-Federal licensee to increase channel requirements to account for up to a 2% increase in mobile units, provided that written documentation from Federal agencies supports at least that number of increased units.

Regional Plan Update Committee Plan

With the approval of the Regional Planning Committee, the Chairman shall appoint a Regional Plan Update Committee (RPUC). This committee will remain in place to recommend changes in the Regional Plan to the FCC and provide a mechanism for interregional resolution of problems which arise.

The standing membership of the RPUC shall consist of each APCO designated local frequency advisor for the Regional Planning Area (3 members); plus one each representing the State of Delaware, New Jersey, Pennsylvania (3 members); three members representing Public Safety Radio Services and two members representing the Special Emergency Radio Service (5 members), for a total of 11 members. In no case shall any radio service have a majority membership.

The following rules and procedures shall be established:

- elect a Chairperson
- develop a mechanism to fill committee vacancies
- with FCC approval modify committee membership
- set response time to process received frequency applications
- publish meeting schedule
- determine committee voting standards
- develop applicant appeal process
- audit implementation of those systems subject to the Plan
- enact policy for frequency give-backs
- maintain coordination with neighboring regional committees
- participate in the annual meeting of all regional committees
- promulgate other rules and procedures as required

It should be noted that the FCC will not fund any expenses incurred by the Regional Plan Update Committee.

REGION 28 PLAN
(As defined in)
FCC Gen. Docket No. 87-112

SPECTRUM UTILIZATION

This portion of the Plan provides a basis for proper spectrum utilization. Its purpose is to guide the Committee in their task of evaluating the implementation of radio communication systems within the Region.

Region Defined

As mentioned earlier, the Federal Communications Commission's Report and Order, adopted November 24, 1988 (applicable to General Docket No. 87-112), forty-eight regions were identified. Region 28 was initially identified as New Jersey (except for counties which were included in NEW YORK-METROPOLITAN Region 8 Plan), Pennsylvania (the counties of Bucks, Chester, Montgomery and Philadelphia), and the State of Delaware. This of course was in conflict with that area which had been identified by the then in place ad hoc committee (The Greater Delaware Valley Regional Planning Committee). A Petition for Partial Reconsideration and Expedited Action was submitted to the FCC requesting that Region 28 be redefined so as to conform to the regional boundaries established by the then in place ad hoc committees. The FCC granted relief. Region 28, as now defined by the FCC is the entire State of Delaware, specifically the counties of New Castle, Kent and Sussex. The southern portion of the State of New Jersey, namely that area south of a division line that follows the northern border of Burlington County and the southern border of Monmouth County. Specifically, the counties of Atlantic, Burlington, Camden, Cape May, Cumberland, Gloucester, Ocean and Salem. Pennsylvania is divided into two regions. The West Branch Susquehanna River is basically the dividing line. Specifically the counties of Bradford, Berks, Bucks, Carbon, Chester, Columbia, Dauphin, Delaware, Montgomery, Philadelphia, Lehigh, Northampton, - Lackawanna, Lancaster, Lebanon, Luzerne, Lycoming, Monroe, Montour, Northumberland, Pike, Schuylkill, Sullivan, Susquehanna, Tioga, Wayne, Wyoming and York.

Usage Guidelines

All systems operating in the FCC Region 28 planning area having five or more channels will be required to be trunked. Those systems having four or less channels may be conventional.

The FCC in its Report and Order states, "Exceptions will be permitted only when a substantial showing is made that alternative technology would be at least as efficient as trunking or that trunking would not meet operational requirements. Exceptions will not be granted routinely. Strong evidence showing why trunking is unacceptable must be presented in support of any request for exception."

Systems of four or less channels operating in the conventional mode who do not meet FCC loading standards will be required to share the frequency on a non-exclusive basis.

Public safety communications at a state level, as it impacts the Region, will be reviewed by the Committee. Statewide public safety agencies will submit their communications plans for impact approval if they utilize communications systems within the Region and those portions of such systems must be compatible with the Regional Plan.

The next level of communication coverage will be county/multiple municipality area. Those systems that are designed to provide area communication coverage must demonstrate their need to require such wide area coverage. Communication coverage beyond the bounds of a jurisdictional area of concern cannot be tolerated unless it is critical to the protection of life and property. If the 800 MHZ trunked radio technology is utilized, the system design must include as many county/multiple municipality government public safety radio users as can be managed technically.

The county/multiple municipality agency or agencies, depending upon systems loading and the need for multiple systems within an area, must provide inter-communications between area wide systems. In a multi-agency environment, a lead agency using 800 MHZ spectrum must implement the Common Channels in this band as mandated by the National Plan. Such implementation must be reviewed and approved by the Committee.

Municipal terminology in each state may be different. In order to provide a title for the next level of communications the term "Township" is used to define the level below county wide. Township communications for public safety purposes must provide only the communications needed within its boundaries. However, if the total number of radios in service does not reach minimum loading criteria for a trunked

system, the township must consider utilizing the next higher system level if 800 MHZ trunked radio is available in the area. As those higher level systems reach capacity, the smaller system communicators in the public safety service must then consider uniting their communications efforts to formulate one large system or forfeit use of the limited 800 MHZ spectrum.

Where smaller conventional 800 MHZ needs are requested, those frequencies to be utilized must not interfere with the region's trunked systems. The 800 MHZ trunked radio system is to be considered the higher technology at this time and in greater compliance with FCC guidelines. The amount of interference that can be tolerated depends on the service affected. Protection of life and property shall receive the highest priority. Disruptive interference with communications involved in these services in all areas shall not be tolerated. Any co-channel interference within an authorized area of coverage will be examined on a case-by-case basis with 12db below system strength to be considered the maximum tolerable nuisance level.

A requesting applicant for radio communications in the 800 MHZ public safety services in the Region will be required to provide loading criteria information for its proposed system. The provisions of this regional plan must be used as a guide for establishing any new systems. Strict adherence to limiting area of coverage to the boundaries of the applicant's jurisdiction must be observed. Overlap or extended coverage must be minimized even where systems utilizing 800 MHZ trunked radio are proposing to intermix systems for cooperative and/or mutual aid purposes.

Antenna heights are to be limited to provide only the necessary coverage for a system. When antenna locations are restricted to only the "high ground", transmitter outputs and special antenna patterns must be employed to produce the necessary coverage with the proper amount of ERP. All necessary precautions will be taken to gain maximum reuse of the limited 800 MHZ spectrum.

As part of this plan, distances between transmitters for co-channel reuse will not be held to seventy (70) mile separation. Separation of co-channel transmitters will be determined by the coverage needs of the applicant, natural barriers for separation, antenna patterning and limited ERP's where possible. System tests and/or propagation studies should also be provided to establish minimum distances for separation

Reassignment of Frequencies

It is anticipated that, in all but the most unusual cases, frequencies presently utilized by a licensee will be turned back for reassignment. The FCC authorized frequency coordinators will be responsible for assignment of the channels to the various agencies awaiting channels in the lower frequency bands. Normal coordination procedures will be followed with these take-back channels except that the applicant evaluation criteria established in the National plan and further defined in this Regional plan is to be considered by the recognized frequency coordinator. In such cases where specific channels are required by numerous applicants, the applicant evaluation matrix will be utilized. In all cases, area of coverage criteria and channel loading criteria will be applied, except upon unique circumstances after receiving a waiver from the Regional Planning Committee. It is not consistent with the goals and objectives of this Region to permit the direct reassignment of radio frequencies between agencies. All frequencies are to be returned to their respective pools to be assigned to the most public beneficial use. Similarly, an agency should not be able to "farm down" frequencies to other services within their political structure simply to take advantage of surplus equipment. The need for communications by such an agency may be outweighed by the needs of another political subdivision.

This Regional Plan will consider for planning purposes the communication needs of all current eligibles under the FCC's Public Safety Radio Services and Special Emergency Radio Services. Additionally, this Regional Plan will consider the communication needs of those public safety service associated operations as the Regional Planning Committee may deem necessary and desirable for Local area needs.

SUPPLEMENT TO THE APPLICATION FORM THE APPLICATION FORM

With each application form (modified APCO Form FDR2) submitted directly to the local frequency advisor, the applicant shall also supply the following supplemental information:

- Details of engineering survey showing radio coverage will not exceed applicant's minimum requirements.
- Explain how system will be used to communicate with other services in other bands.
- Explain any budget commitment that has been made for the proposed system.
- Explain how system will interface with long distant radio communications such as amateur radio,

- satellite communications, and/or long-range emergency preparedness communications systems.
- Statement of need for installing a new 800 MHZ system.
 - Explain and certify that the applicant's agency will comply with the common channel implementation requirements.
 - Detailed information as to the frequencies presently licensed to the applicant. Which frequencies will be turned back and which will be retained. Justification for any retained frequencies.

REGION 28 PLAN
(As defined in)
FCC Gen. Docket No. 87-112

COMMUNICATIONS REQUIREMENTS

Common Channel Implementation

It shall be the responsibility of each agency to provide base station equipment in compliance with the National Plan on the "Calling Channel".

Areas of Operation

The total area of operation shall encompass the Region, as defined elsewhere in the Plan, and shall extend outward to include the total system area of any system of which any portion thereof falls within the Region.

Operation of the Common Channels

Normally, the five interoperable channels are to be used only for activities requiring inter-communications between agencies not sharing any other compatible communications system. Interoperable channels are not to be used by any level agency for daily operations or for interagency communications not requiring interoperability. In major emergency situations, one or more tactical channels may be assigned by the primary dispatch center to alleviate temporary communications loading problems. Police, Fire and providers of Basic and Advanced Life support services will be the primary using agencies. Other services provided in their Public Safety Radio Service may also participate to the extent required to insure the safety of the public. School buses or other approved transportation facilities shall be included into interoperability only to the extent that such vehicles are enrolled in an emergency evacuation plan under the auspices of an emergency management agency.

Sub Regions

The Region shall be broken down into sub-regions that conform to state political boundaries. Each sub-region, defined as a county or a group of counties, shall establish at least one mobile relay operation for the Calling Channel and the tactical channels assigned. Each dispatch center shall be responsible for the coordination with adjacent dispatch centers as well as with other central points in the region, if required. Any agency operating independently of the county plan (sub-region) shall be required to establish a radio control point on the calling and tactical channel in its area.

OPERATING PROCEDURES

Vocabulary

On all common channels plain ENGLISH will be used at all times, and the use of unfamiliar terms, phrases or codes will not be allowed. Users will be coming from varied backgrounds and disciplines each having its own language. Any attempt to introduce a new code would only confuse the issue and cause confusion and possibly even rejection of the interoperability concept.

Calling Channel

The calling channel shall be used to contact other users in the Region that can render assistance at an incident. This channel shall not be utilized as an ongoing working channel. Once contact is made between agencies, an agreed upon tactical or mutual aid channel shall be used for continued communications.

Tactical Channels

These channels are reserved for use by those agencies involved in interagency communications. Incidents requiring multi-agency participation will utilize these channels as directed by the control agency assuming responsibility for an incident or area of concern. These tactical channels 1 through 4 are allocated to each sub-region as primary and secondary, such that co-channel interference will be minimized. The following is a schedule of tactical channel assignments for each of the sub-regions.

Schedule of Tactical Channel Assignments

#	COUNTY	ST	CHANNEL PRI	CHANNEL SEC	#	COUNTY	ST	CHANNEL PRI	CHANNEL SEC
1	Berks	PA	1	4	21	Pike	PA	2	3
2	Bradford	PA	4	1	22	Schuylkill	PA	3	2
3	Bucks	PA	4	1	23	Sullivan	PA	1	4
4	Carbon	PA	4	1	24	Susquehanna	PA	2	3
5	Chester	PA	4	1	25	Tioga	PA	3	2
6	Columbia	PA	4	1	26	Wayne	PA	4	1
7	Dauphin	PA	4	1	27	Wyoming	PA	3	2
8	Delaware	PA	2	3	28	York	PA	1	4
9	Lackawanna	PA	1	4	29	Atlantic	NJ	1	4
10	Lancaster	PA	3	2	30	Burlington	NJ	2	3
11	Lebanon	PA	2	3	31	Camden	NJ	4	1
12	Lehigh	PA	2	3	32	Cape May	NJ	2	3
13	Luzerne	PA	2	3	32	Cumberland	NJ	4	1
14	Lycoming	PA	2	3	34	Gloucester	NJ	2	3
15	Monroe	PA	3	2	35	Ocean	NJ	3	2
16	Montgomery	PA	3	2	36	Salem	NJ	3	2
17	Montour	PA	3	2	37	Kent	DE	1	4
18	Northampton	PA	1	4	38	New Castle	DE	3	2
19	Northumberland	PA	1	4	39	Sussex	DE	4	1
20	Philadelphia	PA	1	4					

Network Operation Method

A network will be established on the calling channel. This network will be wide area to cover large sections of the Region. Multiple networks may be required to fully cover the outlying areas of the region. Multi-state coverage networks will be monitored by a selected agency in each state, i.e., State Police Communications. Communications systems on TAC 1 –TAC 4 will be implemented by agencies that place a trunking system on line. Every geographic section of the Region is intended to be covered by at least one of the working channels. Mobile relays on TAC 1 – TAC 4 will be on a limited coverage design to permit reuse of the channel several times within the Region and in adjacent regions.

Encryption Standards

The use of encryption in the Region #28 Plan is encouraged for those agencies, that as part of their operation have need to conduct covert operations that require some assurance of communications security. The Plan recommends encryption techniques that provide high levels of communication security as well as a high level of voice recognition. It is required that systems operation within the Region that utilize digital encryption algorithms transmit in a digital format with the use of an analog to digital conversion technique having a bit rate not to exceed that which will fit within a 25 KHz channel. Agencies that interoperate with Federal agencies in covert operations will be required to use secure communications that comply with standards set by the National Security Agency. Standards vary according to classifications and are based on the sensitivity and nature of the information to be exchanged. Many of the agencies, such as the FBI, US Customs, DEA, and the Coast Guard, that interoperate with State and Local agencies are required to use encryption which meets FIP-S42 data encryption standard. To provide for encryption at a minimum, all communication system infrastructures should be digital capable that is capable of passing encrypted digital communications through the system. A digital capable fixed end will allow State, Local, and Federal agencies to use their subscriber units on any of these systems in the encrypted mode independently, or by sharing a common key, to work with each other securely. Further, this digital capability will accommodate those agencies with S160 agreements and will provide for anticipated future interoperability requirements. The nature of communications on the 5 common channel pairs to support the National Mutual Aid system is designated for tactical operations, disaster and emergency management, as well as local and regional interoperability. The ability to operate securely on these channels would both protect and enhance these operations. It is evident that the capability of these channels to support secure communications is also strongly recommended.

Use of Long Range Communications

During incidents of major proportions where public safety requirements might include the need for long range communications in and out of a disaster area, alternate radio communications plans are to be addressed by each primary Public Safety Dispatch Center in the Region. As a minimum, the agencies operating such centers shall integrate the appropriate interface either electrically or through the dispatcher to the five national channels as a minimum. Such long distance radio communications might be amateur radio operations, satellite communications and/or long range emergency preparedness communications systems such as State Police radios. These should be incorporated as part of the communications plans of those agencies. They then could provide the means to communicate outside the area for themselves and the smaller agencies that may need assistance. Instances as addressed in the National Public Safety Planning Advisory Committee's Plan such as earthquakes, hurricanes, floods, widespread forest fires or nuclear reactor problems could be a cause for such long range communication needs.

Use of Cellular Telephone

The incorporation of public switched telephone network (PSTN) in a planned radio system is a vital part of public safety communications. To provide this capability, Region 28 strongly recommends the use of cellular telephones in those areas where (and when) cellular service is available. In addition, this regional plan encourages the use of dispatcher intervention for telephone interconnection to the planned radio system. For routine, day-to-day operations, the use of automatic telephone interconnects is not recommended by Region 28. These interconnects will tie up vital air time where the use of cellular telephones might not impact so dramatically. However, in exceptional circumstances (such as the cellular system becomes inoperable due to loading or equipment malfunction, or in those areas where there is no cellular telephone service) automatic telephone interconnects would provide secondary access to the PSTN.

IMPLEMENTATION AND PROCEDURES

Notification

All interested parties were invited to participate in the development of the Regional Plan. This notification was accomplished by the FCC issuing a Public Notice and by the "convener" directly notifying organizations representing eligibles. In addition, the mobile communications print media were contacted by the "convener" and made aware of the Committee's formulation. Also notified were the appropriate state government contacts in each of the three states of Delaware, New Jersey, and Pennsylvania. See "Appendix H"

Evaluation Sub-Committee

The Evaluation Sub-Committee shall consist of the Chairman of the Region 28 committee and the Task Group Facilitators for the Region 28 Committee. In addition, the APCO Frequency Advisors for Delaware, New Jersey, and Pennsylvania shall serve as members of this sub-committee.

Frequency Allocation Process

The attached flow chart, (Appendix A) entitled "800 MHZ Frequency Allocation Process", shows the sequence of events that will be followed by The Region #28 Planning Committee in the process of allocating the six megahertz of 800 MHZ spectrum. This process follows the guidelines established under the National Plan for Public Safety Spectrum Relief. The Region #28 Plan incorporates a filing window concept which will provide for the evaluation of all applications for the available spectrum at the same time.

The evaluation matrix process is as follows:

Upon approval of the Region #28 Plan by the Federal Communications Commission (FCC) the six megahertz of spectrum is made available for allocation. The allocation is placed in the frequency pool (Block #1). If frequencies are available in the pool (a second iteration of the evaluation matrix could occur if all frequencies are not allocated on the first iteration) a window opening announcement is made (Block #2). The window period will be two calendar months or 60 days, (Block #3 thru Block #4) with early or late applications rejected (Block #5). Those applications which are received during the window period are reviewed by the local frequency advisor of the respective state from which the application originated (Block #6). The local advisor will determine if the application is in compliance with state plans, if a state plan exists (Block #7). An application that is not in compliance will be returned to the applicant with an explanation of changes required to be compliant. Having complied with state plans and provided a need assessment (Block 9), the Evaluation Sub-Committee will apply the evaluation Matrix (Block 10). The Evaluation Sub-Committee is defined as: two members (minimum) from each State of the Region #28 Planning Committee.

The implementation of the evaluation matrix will result in the award of a score for each application. That score is the total of the points awarded in seven categories, with a maximum possible score of 1000 points, as outlined in Appendix B. The seven categories are as follows:

EVALUATION MATRIX

I. SERVICE (Block #11) - Maximum score 350 points. Each of the eligible services has a predetermined point value. That point value ranging from 0 to 35 is multiplied by ten (10) to determine the score for the Service Category. An applicant with multiple services will be scored on the basis of the percentage that each service represents of the total system. That is, a system which is 50 percent police and 50 percent school administration (local government) would be awarded the total of 50 percent of the point value for police plus 50 percent of the point value for school administration.

II. INTEROPERABILITY (Block #12) - Maximum score 100 points. The application is scored on the degree of interoperability that is demonstrated with a range of points from 0 to 100. This category does not rate the application on the inclusion of the mandated five common channels for interoperability. This category does rate the application on his proposed ability to communicate with different levels of government and services during times of emergency.

III. LOADING (Block #13) - Maximum score 200 points. Those applicants that have demonstrated that they are part of a cooperative, multi organization system will be scored on a range of 0 to 150 points depending upon the extent of the cooperative system. An expansion of an existing 800 MHz system will be scored on a range of 0 to 50 points, depending upon the degree of expansion. A system could be an expansion of an existing 800 MHz system and a cooperative system as well and as a result receive the combined point values for these two sub-categories for a maximum value of 200 points.

IV. SPECTRUM EFFICIENT TECHNOLOGY (Block #14) - Maximum score 50 points. This category scores the applicant on the degree of spectrum efficient technology that the system demonstrates. A point value range of 0 to 50 points can be awarded for this category. A trunked system would be considered a spectrum efficient technology as well as any technological systems feature which is designed to enhance the efficiency of the system and provide for the efficient use of spectrum.

V. SYSTEMS IMPLEMENTATION FACTORS (Block #15) - Maximum score 100 points. This category scores the applicant on two factors, budgetary commitment and planning completeness. The degree of budgetary commitment is scored on a range of 0 to 50 points. An applicant that demonstrates a high degree of commitment in funding the proposed system will receive the higher score. Each applicant will be scored on the degree of planning completeness with a range of scoring from 0 to 50 points. Applicants will be required to submit a time table for the implementation of the communications system or systems.

VI. GEOGRAPHIC EFFICIENCY (Block #16) - Maximum point value of 100 points. Each applicant will be scored on the level of geographic efficiency based on the following factors; total number of radio units (including control stations), the number of frequency pairs requested, and the square miles covered. For a strip or ribbon system the square mile figure will be replaced by the length in miles of the strip or ribbon.

VII. GIVEBACKS (Block #17) - Maximum score 100 points. The applicant is scored in two sub-categories, each having a point range of 0 to 50; the number of channels given back and the extent of availability of those channels to others. The greater the number of channel given backs, the higher the score. The greater the level of availability of the give-backs, the higher the score will be in this sub-category.

Points are totaled for each application (Block #18) and the applications are prioritized by the Evaluation Sub-Committee (Block #19). The frequency pool is allocated (Block #20) and the Regional Plan is updated. The plan is then sent to the FCC for review and approval as outlined in the Report and Order Docket 87-112 (Block #21). Upon approval of the plan by the FCC, the applicant will be notified and the applications submitted to APCO for coordination (block 22), after which, the FCC would grant the license to the applicant (Block #23).

The system implementation is monitored by the Local Frequency Advisor who determines if progress is made on the implementation of the system (Block #24). If progress is made (Block #25) the system is ultimately implemented (Block #26). If progress is not made the licensee is warned of the consequences of

his lack of progress (Block #27). The Local Frequency Advisor continues to monitor progress on the implementation of the system (Block #28). If the continued monitoring indicates that progress is still not being made the licensee is notified of pending action to withdraw the license (Block #29). The notified licensee can appeal this action (Block #30) or can allow the license to be withdrawn (Block #31). If the allocated frequencies are withdrawn they are added back to the frequency pool (Block #32) and the process starts a second iteration at Block #1.

Implementation Schedules (Slow Growth)¹

The majorities of eligible public safety organizations are either of State and Local government, or else are subject to governmental regulation. The nature of governmental planning and budgeting processes, combined with difficult revenue constraints, prohibits most eligible's from implementing newer technology systems in the normal time required by **FCC Rules**² (8 months for construction of conventional stations, 12 months for trunked stations). In most cases, public safety systems will require multi-year phased implementation schedules requiring three to five times as long to construct as private or commercial systems. Regional, wide area, and statewide systems will require even longer periods to construct.

In view of these known situations, this Region Plan establishes an extended implementation schedule ("slow growth") in accordance with **FCC Rules**³ which is available to all eligible applicants, if requested by stating "SLOW GROWTH" on the license application.

A "slow growth" schedule will allow up to three years for completion of station construction. Regardless of station construction time however, the FCC five-year channel loading requirement (of mobiles, portables and RF control stations) is maintained by this Region Plan.

Applicants who clearly request "SLOW GROWTH" on their license application are not required to submit the specific items of "slow growth" justification otherwise required by FCC Rules.

Applicants who propose a station construction schedule which is longer than the three-year "slow growth" schedule, or a channel loading schedule (for mobiles, portables, and RF control stations) beyond five years, are required to submit a Request for Waiver for such additional extensions of time in accordance with FCC Rules.

Appeal Process

Throughout the frequency allocation process applicants are given opportunities to appeal decisions which have caused rejection of their application. The appeal process has two levels; APCO and the FCC. An applicant who decides to appeal a rejected application should initiate that appeal immediately upon notification of rejection. In the event that an appeal reaches the second level, the FCC, their decision will be final and binding upon all parties.

1 This section of the Plan was accomplished through an amendment approved by the FCC.

2 See FCC Rules and Regulations 90.155 (a) and 90.631 (e)

3 See FCC Rules and Regulations 90.629, 90.631 and 90.633.

REGION 28 PLAN
(As defined in)
FCC Gen. Docket No. 87-112

EPILOGUE

The development of an operational plan providing for frequency assignment within Region 28 has been achieved with much effort, expense and time by the parties of interest. The formulating committee has had the advantage of a wide range of individual representation and eligible applicants participating during the process. The objective, upon which it has been devised, recognizes current and future public safety needs including the interoperability among users (for both the new allocation and for those presently using 806/821 & 851/866 MHz Band). The plan further recognizes the importance and proper use of the common mutual aid channels also established by the allocation.

Of great importance was the need to insure that the plan be flexible enough to provide for expansion of systems. System modifications must not be unduly restricted in order to employ evolving applications and technologies or to provide voice/data encryption. The interdiction of high speed data transmission from and to mobile units as well as between base stations and links, could offer some highly efficient alternatives to traditional technologies and will serve both inter and intra disciplinary modes of operation.

No matter how proficient, our plan is not without its caveats. More than likely any deficiency will be caused not by ignorance but in the absence of a more convincing argument supporting another alternative. An issue requiring refinement will be the obvious interaction of coordination required between Regions. Frequency demands near borders will surely generate conflicts between Committee assignment criteria. In the case of Region 28, the Commonwealth of Pennsylvania is a divided Region which conceivably could require as many as eight (8) Regional concurrences for the assignment of a single channel to be used statewide. New Jersey, also in Region 28, faces stiff competition for resources with an adjacent major metropolitan area.

The cumulative effect of this added coordination activity will impose strain upon the system and will have a profound effect upon the resources any one Region may be able to assign. Such predictable limitation upon the frequencies influenced by interregional coordination is not a new problem.

Preliminary restrictions could very well deny the use of better than half of the frequency table in cases where large metropolitan statistical areas overlap or are adjacent.

The establishment of this plan under which allocations will be made, require a much greater emphasis upon short range and long range telecommunications planning. Because the Federal Communications Commission has indicated that it intends to grant waivers in cases which are fully justifiable, the nature of waivers will soon be accepted as reasonably assured and become practice. By assuming that greater emphasis be placed in awarding allocation consideration to both funding and planning criteria, many of these waivers may not be necessary and allowing good long range planning to have a higher credibility.

Likewise, it may be necessary for Committees to engage in compliant inspections in order to assure that its engineering criteria have not been compromised. As a matter of routine, such inspections if sanctioned by the FCC for informational purposes could preserve the assignment integrity of allocations. On the other hand, this concept is not without basis in current practice and could very well be a controversial issue.

For almost every assignment criteria proposed, an adjustment will more than likely need to be made. Planning groups wishing to conclude their work in order to provide an approved allocation rationale must also provide for suitable policy revisions should the need arise.

The issue of engineering standards in signaling and equipment systems has clearly been resolved in the record but remains as an issue of controversy. The long range effect of no set standard will be hard to

predict. Yet it may be possible for interface software to solve the manufacturing incompatibility problem in the future with imposition of such standards. In addition, manufacturers who develop equipment and systems with ease of frequency agility can maximize the effectiveness of any mistakenly assigned frequencies or whole scale readjustment which may be required in an ongoing program. Such capability would be very desirable and definitely enhance the Frequency Coordinating Group's task of maximizing systems.

Finally, the committee encourages the development of user groups to resolve the many economies of scale, and facility sharing arrangements possible in the establishment of future systems. Perhaps legislation could enhance the attractiveness of such sharing by protecting users from unsuspected liabilities characteristic of such participation.

The potential for the creative use of this resource and the effective use of the reserve are at complete odds. If current resources are totally maximized then reserves may be slow to be assigned or assigned elsewhere. If on the other hand Committees are liberal in their assignments, the reserves may be reached far sooner than predicted. This self-defeating conflict of interest will play a part in the effectiveness of all planning and coordination group of activities. The FCC should provide some assurance now that reserves will be provided so that initial efforts will not be undermined.

* SA/SS = Single Agency/Single Service
* SA/MS = Single Agency/Multiple Service
* MA/MS = Multiple Agency/Multiple Service

CATEGORY II. INTEROPERABILITY

This category measures the ability of the Applicant to communicate with other governmental entities and services during times of emergency, without consideration given for the five common channels. The 100 points are awarded on the basis of ability to communicate with additional entities or services:

ADDITIONAL ENTITIES:	NUMBER OF POINTS:
ONE	20
TWO	40
THREE	60
FOUR	80
FIVE OR MORE	100

CATEGORY III. LOADING

PART 1:

Loading will consider the cooperative, multi-organization type systems awarding points based on 10 points per hundred mobiles of actual system loading:

NUMBER OF CHANNELS:	POTENTIAL UNIT LOADING:	NUMBER OF POINTS:
1 TO 4	300 UNITS	30
5 TO 9	900 UNITS	90
10 TO 14	1400 UNITS	140
15 OR MORE	1500 PLUS	150

PART 2:

Expansion to an existing system is awarded bonus points based on the minimum number of channels requested with the maximum loading at 10 points per channel, up to five channels:

NUMBER OF CHANNELS:	POTENTIAL UNIT LOADING:	NUMBER OF BONUS POINTS:
1	100	50
2	200	40
3	300	30
4	400	20
5 OR MORE	500 PLUS	10

CATEGORY IV. SPECTRUM EFFICIENT TECHNOLOGY

Applications are awarded points based on the type of technology utilized at 5 points per channel for conventional systems and 10 points per channel for trunking systems and is considered on bases of spectrum which offers maximum loading with minimum channels:

NUMBER OF CHANNELS:	POINTS FOR CONVENTIONAL:	POINTS FOR TRUNKING:
1	25	50
2	20	40
3	15	30
4	10	20
5 OR MORE	5	10

CATEGORY V. SYSTEM IMPLEMENTATION

If the applicant provides documentation of clear budgetary

commitment and documentation of complete plan for system implementation. The application will be awarded the entire 100 points. However, if the documentation does not clearly demonstrate total budget and planning commitment to a complete system then the application will receive a percentage of the total 100 points as determined by the Evaluation Subcommittee.

CATEGORY VI. GEOGRAPHIC EFFICIENCY

The application will be awarded a part of the 100 points based on two factors:

1. the total square-miles of proposed system coverage at a percentage ratio of MOBILES-PER-MILE, and
2. the potential channel reuse, with exceptions to "strip or ribbon" type systems, which will receive a fixed score of 75 points due to the difficulty in calculating efficiency of such systems.

Apply the following formulas:

1. $\{ (\text{square miles}/10) / (\text{square miles}/\text{mobiles}) = \% \text{ FACTOR} \}$
2. $\{ \text{POINTS AWARD} = \% \text{ FACTOR} * 50 \}$

Example: A County Government entity requests a 5 channel system for a proposed system in a geographic area having 325 square miles and a

loading of 750 mobiles and portables. The system area of 325 square miles is divided by the 750 mobiles which is a ratio of .433, then divide a scale factor of 32.5 by the .433 ratio to arrive at percent factor of 75 % of the total points to be awarded which is 75% of 50 or 37.5 points. The other 50 points will be awarded based on the channel reuse potential (1 point per 10 square miles of covered area). This example covers an area of 325 square miles. If we divide the 325 by 10 we will arrive at an award of 32.5 points for channel reuse. The points for this example are: 37.5 for mobiles-per-mile and 32.5 for channel reuse for a total of 70 points.

CATEGORY VII. GIVEBACKS

The points awarded on the number of channels given back and the extent of reuse by other entities will be determined by the amount of documentation provided by the applicant. The Core Committee will then determine a percentage based on the number of channels requested and the number of channels being given back and a prospect list for reuse provided by the local frequency advisor.

APPENDIX E - Regional Planning Area Map

89 JUL 27 AM 10:52

July 21, 1984

Mr. Martin G. Ficke, Director
Secretary for Region 28
County of Bucks
Department of Communications
Administration Building
Broad & Court Streets
Doylestown, Pennsylvania 18901

Dear Mr. Ficke:

Please consider this letter our written authorization for you to reproduce one hundred (100) copies of our map No: 207-Delaware, 228-New Jersey, 236-Pennsylvania, and our County/Town-Middle Atlantic United States Map. Our normal copyright fee has been waived in this instance; however, our mandatory copyright line must remain on all reproductions.

If additional copies are required another waiver must be obtained.

Trusting we have been of assistance to you, we are:

Very truly yours,

(Mrs.) Kathleen Roche
Copyright Division

46-35 54th Road, Maspeth, New York 11378 • (718) 784-0055 • Telex: 968126 • Cable: AMERMAP

APPENDIX F1- FREQUENCY ASSIGNMENT METHODOLOGY

INTRODUCTION:

The frequency assignment methodology used is a two stage process. The first stage is to assign channels, to the degree possible, to all eligibles who have applied for them in accordance with the plan. The second stage is to create frequency pools to be used by future applicants for channels which satisfy the coverage and interference parameters to be defined later in this section.

DESIRED COVERAGE:

The desired coverage of a system is considered to be, as a maximum, three (3) miles outside of the applicant's jurisdiction. The maximum desired mean signal strength at this contour shall not exceed +40dbu (+40db above one microvolt per meter). In order to allow for practical system design, the 3 mile pad may be altered on a case-by-case basis, and the maximum coverage radius in all cases shall not exceed five (5) miles.

CO-CHANNEL INTERFERENCE:

Co-channel assignments will be made when it is determined that the two or more systems will create a signal strength of +5dbu or less anywhere within their co-channel partner's boundary.

ADJACENT CHANNEL INTERFERENCE:

Adjacent channel assignments will be made when it is determined that the two or more systems will create a signal strength of +25dbu or less anywhere within their adjacent channel partner's boundary.

MISCELLANEOUS CONSIDERATIONS:

for practical engineering reasons in the area of transmitter combining, frequency assignments for the same site, for the same applicant, will be spaced 0.25 MHZ apart, to the degree possible.

COMPUTER MODEL:

The computer propagation model used to calculate the desired mean signal strength is Okumura/Hata. This model has been shown to provide the most accurate results in this frequency band.

COMPUTER AIDED ASSIGNMENTS:

A computer program is used to do the many calculations and iterations required to solve an otherwise impossible task of efficient channel usage.

Inputs to the program include the applicant's identification, location, coverage requirements and number of channels. The computer will take all of the inputs and find, if possible, a solution of specific channel assignments which meet the coverage and interference parameters stated above using the minimum number of channels.

Following this stage, future assignments are considered by creating compatible pools of channels based on growth projections of population.

APPENDIX I - Committee Rules

REGION 28 PLAN APPENDIX I
(As defined in)
FCC Gen. Docket No. 87-112

COMMITTEE RULES

1. After being recognized by the Chair any person may address the meeting.
2. Quorum is at least 2 members, each representing a different agency from each state (Del., PA., N.J.) plus the Chair or the Chair's Alternate.
3. One vote per eligible agency. Any number of members in an agency may participate, but the agency has only one vote.
4. All motions require a simple majority of eligible agencies present in order to carry the motion.
5. Regular meeting dates to be scheduled in advance about once a month.
6. Special meetings to be called by the Chair with seven day's notice.
7. Eligible members may submit agenda items to the Chair up to two weeks prior to the next scheduled meeting.

September 15, 1969

Mr. Thomas E. Glendon
Chairman
Region 28 Planning Committee
2122 Sierra Road
Plymouth Meeting, PA 19462

Dear Tom:

I have reviewed your draft of the Region 28 plan. I can find no problems or conflicts between our two plans as each has been run by the ERTHC computer program allowing consideration for the edge effect.

The fact that both our plans include a standing committee to administer the plan and their committee responsibilities list includes coordination with neighboring regions, this should insure the future compatibility of our plans.

I am enclosing a copy of the Region 20 draft for your evaluation and comments. We hope to do the word smithing and other minor corrections within the next two weeks and be ready for submission to the FCC by mid to late October.

Your cooperation in this effort is greatly appreciated and my congratulations to you and your committee for the fine efforts put forth on your plan.

Sincerely,

Weldon P. Hale
Chairman
Region 20

Dear Mr. Gibson,

We have carefully reviewed your Region 28 Plan and find that the inter regional coordination provisions are acceptable.

We appreciate being made a part of your planning process since your committee's inception. It is evident that much work has been done to complete your plan and we are pleased to provide our concurrence.

Please extend our best regards to the membership of your committee.

The Region 28 Planning Committee is pleased to submit its Regional Plan for your review and approval. The Committee has spent nearly eighteen months of effort in formulating the best possible plan to provide for the spectrum needs of the most possible agencies with a maximum utilization of spectrum available.

The Plan represents the best effort of 76 members representing 57 agencies and addresses all the concerns expressed by the Federal Communications Commission in its Report and Order terminating Docket 87-112.

Should you have any questions regarding this plan, please call me at (215) 828-8762.

REGION 28 PLANNING COMMITTEE
2122 SIERRA ROAD
PLYMOUTH MEETING, PA 19062
215-828-8762

September 29, 1988

Dr. Thomas Stanley
Chief Engineer
Federal Communications Commission
2025 M Street NW
Washington, D.C. 20554

Dear Dr. Stanley:

The Region 28 Planning Committee is pleased to submit its Regional Plan for your review and approval. The Committee has spent nearly eighteen months of effort in formulating the best possible plan to provide for the spectrum needs of the most possible agencies with a maximum utilization of spectrum available.

The Plan represents the best effort of 76 members representing 57 agencies and addresses all the concerns expressed by the Federal Communications Commission in its Report and Order terminating Docket 87-112.

Should you have any questions regarding this plan, please call me at (215) 828-8762.

Sincerely yours,

Thomas E. Gibson
Chairman

Jersey City, NJ 07306

October 3, 1989

Thomas E. Gibson Chairman
Region 28 Planning Committee
2122 Sierra Road
Plymouth Meeting, PA 19462

Dear Tom:

As you requested in your letter of September 8, I have reviewed your plan paying particular attention to the frequency assignments especially in the area where Region 28 borders with Region 8. I believe, that without exception, there will not be any frequency assignment problems between our Regions. Therefore, I see no reason for you not to submit the plan as written.

Your Committee is to be congratulated on a job well done.

Sincerely,

Carroll F. White
Committee Coordinator
Region 8

ADDENDUM NUMBER 2

REGION 28 PLANNING COMMITTEE
2122 SIERRA ROAD
PLYMOUTH MEETING, PA 19462
215-928-8762

NOVEMBER 20, 1989

Allen L. Capwell
Wyoming County Sheriff
Chairman Region 55 Planning Committee
145 North Main Street
Warsaw, NY 14569

Dear Sheriff Capwell:

I am enclosing a copy of the Region 28 plan which is under review by the FCC. I would appreciate any comments that you may have.

I would appreciate a letter of concurrence once you have had an opportunity to review the plan.

Thank you for your consideration and my best regards to the membership of your committee.

Sincerely yours,

Thomas E. Gibson
Chairman

RECEIVED
COMMUNICATIONS
90 FEB 12 PM 12:22

TO: Region 28 Planning Committee
FROM: Tom Gibson, Chairman 
DATE: February 12, 1990
RE: Plan Approval

It is my great pleasure to inform you that the Region 28 Plan was approved on February 2, 1990 by the FCC. The FCC review produced only minor problems which were easily resolved. Two addenda were required: a list of unassigned channels and proof of coordination with Region 35 (which we had overlooked as being partially adjacent to our region). In addition, the concurrence from Region 8 was received after we had already filed so that letter was added as a third addendum.

Copies of the addenda are included with this mailing so that all committee members will have the complete plan as accepted by the FCC.

Our next meeting is set for February 28th at 10:00 A.M. at the Bucks County Fire Training Academy. This will be a very important meeting as we must begin work on coordinating the channels which were assigned in the Plan and considering when we should open a second window for applications.

I look forward to seeing each of you at the meeting.
